Parishes, Market Towns, Villages, Hamlets,
and smallest Places, In
E N G L A N D and W A L E S.

Alphabetically set down, as they be in every Shire.
With the Names of the Hundreds in which they are,
and how many Towns there are in
every Hundred.

So that naming any Town or Place in *England* and *Wales*, you
may presently in the Alphabet find it, and know in what Shire
and Hundred it is, and so know the distance from it to the Shire
Town, and in the large Table for Shires in *England* how far to
London, or from it to any other Town in *England*.

A Work very necessary

For Travellers, Quartermasters, Gatherers of Breefs, Strangers,
Carriers, and Messengers with Letters, and all others that know
the name of the place, but can neither tell where it is, nor how
to goe unto it.

If you would find out any Shire, note that the Shires lie
Alphabetically, beginning with *Berk-shire*, and so
following accordingly.

Summa cuius virtus pulcherrima merces.

L O N D O N: Printed by M. S. for Tho: Jenner, at the
South-entrance of the Royall Exchange. 1662.

The use of all the ensuing Tables.

TO know the distance between any two Cities or Towns in any of these Tables, seek the places desired in the upper and side Catalogues of Townes, and direct your eye from either place between the lines both from above and from the side, and where the lines meet in square you shall find the number of miles. *For Example;* If you would know how far *Lincoln* is from *Excester*, look in the Card of Shire Towns, and find *Lincoln* in the side, and carry your eye directly from thence between the lines untill it come under *Excester*, and where they meet in square you shall find 178, which is the distance of miles.

If you find any Town in the side which will not extend to make a square with the desired Town above, then look for the Town which you find in the side in the upper part, and the upper part in the side. *For Example,* If you desire to know the distance between *Glocester* and *Oxford*, if you look *Glocester* in the side, you cannot bring *Oxford* in a square with *Glocester*, but if you look *Glocester* above and *Oxford* in the side, you shall find the square and the distance 33 miles, and so of the other ensuing Tables.

To know whether you are to travell, East, West, North or South, from the place where you are, to the place whither you intend to goe, and through what Shires you must passe.

Look in the small Map of England, placed before the great Table of Shire Towns, & draw a streight line from the next Shire Town lying in your way to that Shire Town which is next the place whither you desire to goe, and you shall immediately see whether your Journey be East, West, North or South, and what Shires the line brings you through, those Shires you must passe. *As for Example,* If you would travell from *London* to *York*, you will perceive by the Map that it lyeth North from *London*, then draw a line or carry your eye streight from *London* to *York*, and you shall find the way lyeth through *Middlesex*, *Hartford-shire*, *Huntington-shire*, *Northampton-shire*, *Lincoln-shire*, *Nottingham-shire*, and *York-shire*; and so for any other place.

Again to know what Market Towns lie in your way which way soever you travell.

When you have seen in the generall Map what Shires you are to passe through, observe whether you must passe through the middle or the skirts of each Shire, then turn to the Tables of those Shires, and at the foot of each of them you shall have a Map, wherein the Towns are signified as they lie in every Shire by the first letter of every Town, & if you must pass through the middle of the Shire, then the letters about the middle of the Map declare the Towns by which you must go, but if through the skirts of the Shire, then the letters in the skirts of the Map are your direction.
